

# ESET NOD32 Antivirus for Kerio Control

You demand the most complete protection available for your business network – that’s why you chose the Kerio Control. Now, pick the toughest antivirus plugin to protect the vulnerable surfaces of your system. Based on the award-winning ESET NOD32® Antivirus scanning engine, this product integrates seamlessly with your firewall architecture, scanning all traffic through your firewall over HTTP, FTP, POP3 and SMTP protocols using ThreatSense® advanced heuristics – the very same technology that hasn’t missed an “In-the-Wild” virus in Virus Bulletin tests in over a decade.

ESET is different. Unlike competitive products that rely on signature updates alone, ESET NOD32 Antivirus uses advanced heuristics to proactively protect you from new attacks. That means on Day Zero of a malware outbreak, your ESET/Kerio Control-based network is safe.

The NOD32 plugin is custom engineered to cause no slowdown in your server. Installation is a breeze. And because it’s unobtrusive, your productivity won’t be hampered by annoying messages or false positives. It truly is a set-it and forget-it solution.

## Scalable and customizable

Installation is simple and headache-free with the ESET NOD32 plugin preinstalled via the Kerio Administration Console. Your signature updates are downloaded from ESET’s servers automatically, so you won’t need to do anything to stay protected. From an administration perspective, the user-friendly interface gives you complete control of the ESET kernel – without any complex configuration hassles. And best of all, ESET won’t cause server or network slowdown.

Frugal with system resources, ESET runs quietly in the background, making sure your network traffic is scanned and malware free. With ESET NOD32 Antivirus paired with Kerio, you can focus on important computing tasks – running your business, not monitoring your antivirus.

## Features

<b>Proactive protection</b>	Advanced heuristics detection technology screens for new malware strains – providing better protection than AV scanners that rely only on existing virus signatures.
<b>Timely and discreet updates</b>	ESET NOD32’s small virus signature updates ensure maximum protection from the latest threats without slowing your server down.
<b>Protects your network</b>	ESET’s trusted scanning core scans all HTTP, FTP SMTP and POP3 traffic.
<b>Self defense</b>	ESET NOD32 Antivirus has built-in technology to prevent malicious software from corrupting or disabling it, so you can rest assured your system is always protected.
<b>Dual support for Kerio</b>	If you’re using both Kerio Connect and Kerio Control, you still only need one instance of ESET NOD32 Antivirus on the server.

## Key Benefits

<b>Easy administration</b>	ESET Remote Administrator takes all the headaches out of installing, configuring and monitoring.
<b>Seamless integration</b>	ESET’s small installation package smoothly integrates with your Kerio Connect. The entire installation takes just moments and requires little or no additional configuration to get your system up, running and fully protected.
<b>Trusted technology</b>	ESET NOD32 Antivirus for Kerio Connect uses our ThreatSense® engine to deliver the award-winning antivirus and anti-malware protection that is trusted by millions of users. By “sandboxing” potentially malicious code in a controlled setting, ESET NOD32 can stop a virus before it ever executes on your machines. Your mail server will be protected from malware that other antivirus software will not recognize as a threat – which is precisely what matters in the battle against new outbreaks.
<b>Proven performance</b>	ESET’s consistent recognition by third-party independent test organizations attests to the quality of our protection. We’ve won more independent antivirus awards than any other product. For over a decade, ESET NOD32 has won accolades from organizations such as VB100 and AV-Comparatives for outstanding overall performance and threat detection with fewer false positives than other antivirus products.
<b>Resource efficient</b>	ESET’s lightweight scanning engine tackles all your server traffic from a central point. That means ESET NOD32 Antivirus for Kerio Control consumes just a fraction of the system resources used by other products, allowing your servers and PCs to dedicate their resources to your business, not your antivirus software.

---

## System requirements

---

<b>Processors supported:</b>	Intel or AMD x86/x64
<b>Operating systems:</b>	Microsoft Windows 2000 (32-bit and 64-bit versions)
<b>Memory:</b>	44 MB
<b>Disk space:</b>	28 MB (plus an additional 35 MB for installation)
<b>Kerio Connect:</b>	Versions 6.7 and newer
